

TR Güzel bir yemek yemek ya da bir şeyler içmek, sevdiğimizle bir araya gelmek ve sosyal vakit geçirmek için restoranlar ve kafeler sık sık tercih ettiğimiz yerlerdir. Mekan konusunda seçim yaparken, ortamın göze hitap eden bir yer olması önceliklerimiz arasındadır. Buna nazaran böyle yerlerde bulunduğumuzda, eğer ortam kalabalık ise bir adım ötemizde oturan kişiye sesimizi duyurmak için ciddi bir çaba harcar ve belli bir zaman sonra bunun bizi ve zihnimizi ne kadar yordüğünü hayretle fark ederiz. Bu durum, ortamın kulağa değil tamamıyla göze hitap eden bir iç mekan tasarımına sahip olmasından kaynaklanmaktadır. Ses yalıtımına sahip duvar kağıtlarıyla dekore edilmiş bir restoran/cafe, kişilere vakit geçirmeleri için kaliteli bir ortam yaratır. Bununla birlikte görsel ve tatsal zevklerin yanı sıra verimli bir iletişim kurmamıza yardımcı olarak duyuşal farkındalık ve duyuşal memnuniyet yaşamamızı da destekler.

EN Restaurants and cafes are often the places we prefer to have a nice meal or a drink, to meet with our loved ones and to spend a social time. When choosing the place, it is our priority filter to be a place that appeals to the eye. However, when we are in places like this, if the environment is crowded, we make a serious effort to announce our voice to the person sitting a step away, and after a certain time we notice with astonishment how much this exhausts us and our mind. This is due to the fact that the environment has an interior design appealing to the eye, not to the ear. A restaurant / cafe decorated with soundproofed wallpapers creates a quality environment for people to spend time. In addition, it supports our sensory awareness and satisfaction by helping us to create efficient communication as well as visual and taste pleasures.

Type of assembly E-50 according to DIN EN ISO 354. Textile in front of total 50 mm, included 2 x 20 mm ISOVER SSP 2 and 10 mm airspace.

Test Report No: 048-15-L02_rev00

EN The theater is a show of performances on the stage and in front of the audience. This type of art has become a pleasant cultural activity that many people often prefer to go. In theaters where the theater play is performed live, it is very important that the conversations and communication in the stage are passed on to the audience as it is. If there is an acoustic barrier in the environment, the dialogues for the rear-row viewers cannot be fully understood and the conversations can become unhearable together with applauds and laughs. The fact that theaters, which do not progress from recordings like in cinemas, do not have an action button such as increasing the sound level. If the theater halls have acoustic wallpapers that provide sound isolation, it will add a sensible value to this art and thus make the show more meaningful for the audience.

TR Sosyalleşmek, stresten uzaklaşmak ve eğlenmek niyetleriyle tercih edilen gece kulüplerinin en ayırt edici özelliklerinden biri sundukları ortam, dolayısıyla çaldıkları müziktir. Bu tarz yerlerin bilinirliği ve popülerliği insanları ne kadar eğlendirdiğine bağlıdır; çalınan müziklerin tarzı ve ses kalitesi ise bu noktada belirleyici bir rol oynar. Özellikle, daha kalabalık mekanlarda ve gecenin ilerleyen saatlerinde artırılan ses seviyesi ile beraber, ses, müzikten çok gürültü halini almaya başlar ve bir noktadan sonra kişileri rahatsız eder hale gelir. Bu durumda da ses kalitesi artık söz konusu dahi değildir. Ses yalıtımını artıran ve yankı seviyesini düşüren akustik duvar kağıtları, gece kulüplerinin sunmayı istediği standarda kolayca ulaşabilmesini sağlar ve mekan sahipleri için çevreyi rahatsız etmeyen bir ortam yaratmayı destekler. Buna ek olarak, çalınan müzikler eğlenmeye gelen kişilere olduğu gibi ulaşır ve mekan gerçekten zevk veren kaliteli bir müzik çalınacağına ortam hazırlar.

EN One of the most distinguishing features of nightclubs, which are preferred with their intention to socialize, get away from stress and have fun, is the environment they offer and therefore the music they play. The knowable and popularity of such places depend on how much they entertain people; the style and sound quality of the music played play a determinative role at this point. In particular, in the more crowded evenings and late night hours, with the increased sound level, the sound becomes more noise than music, and at some point, it becomes uncomfortable for people. In this case, the sound quality is no longer even mentioned. Acoustic wallpapers, which increase the sound insulation and reduce the reverberation level, allow the nightclubs to easily approach the standard they want to offer and support the creation of an environment that does not disturb the environment for the owners. In addition to this, the music being played reaches to entertainers as it is, and the venue really prepares an environment for the enjoyment of a quality music feast that gives them a real pleasure.

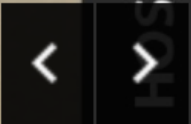

EN

The support of the interior designers in the process of decorating the houses is much bigger than before. While the interior designers who are received their idea and help are payed special attention so much, the interior sound designers are mostly remain in the background. The phenomenon mentioned and underlined here is: not with appearance, but with the relevant-designed experiential architecture. In our homes which are our permanent living spaces, it is also important to create a sensory environment as well as visual environment. The purpose of acoustic wallpapers at this point; we feel better, become more healthy and productive people, and develop our social behavior. It is very effective for our life quality to spend a quieter, more joyous life in our soundproof atmosphere; so to have dialog opportunities passing each other as it is and a reverberation-free home environment. It is enough to benefit from acoustic wallpapers in decoration in order to realize this effect in life.
